NSF ICF , New Facility update

- March 30 ice core move start, est. two months to move the entire inventor
- Polar Field Services to provide the labor, Richard and I to oversee the move
- New freezer is holding temperatures but working out defrost, VDF, ATS and alarm issues
- Old facility is functioning well, issues with 40-year-old compressor fuses on a rental back up generator due to catastrophic failure last year with old back up generator
- The new facility is amazing but very complicated to operate, maintain and understand the multiple service contracts needed for refrigeration and fire suppression systems
- We are disposing of our old Space Saver shelving- please contact if interested- it'd be a shame to scrap it.

Mobile racking system

Common area and new exam space
