IDP Policy on drilling support to scientists who are not funded by NSF

The Ice Drilling Program (IDP) is a Cooperative Agreement funded by the National Science Foundation to provide NSF-funded scientists with both community leadership in planning and ice drilling support. In order to provide consistency in drilling support, IDP equipment and expertise is available only to scientists for use in currently-funded NSF science projects. IDP Letters of Support are provided to scientists for use in NSF proposals that will require IDP equipment or drilling services. IDP services are not provided for projects that are not funded by NSF.
